per wheel \$40⁰⁰

*Prices quoted are for a motorcycle that is in average condition and subject to review. We will notify those in advance with motorcycles needing more attention to bring back the shine. Touching up painted surfaces will not return the look to original condition. If you prefer the part to look like new we would be glad to give you a quote for a new painted part. Buffing is designed to remove light surface scratches in the clear coat or paint. Not all scratches can be removed by buffing.
